

## Technology Transfer Metrics

The FMRI's technology transfer goal is to provide availability of research results to potential users in a form that can be directly implemented, utilized or otherwise applied. Our results will be based on achievements of research initiatives, workforce development projects, and education dissemination. FMRI's technology transfer will align with the mission of FAU, through collaborative activities, scholarly research, and dedicated public service. Researchers will be working closely with stakeholders and potential adopters to be sure that the needs of the research are relevant to the issues of the stakeholders.

FMRI's goal is to establish the center in the national and international level and produce measurable and worthy outcomes, outputs and research impacts for our community. Thus, all the research proposals that have been submitted to the center must include recommendation for implementation and deployment, and proposed potential stakeholders.

### Target Outcomes

**8**  
# of workshops/seminars/webinars developed

**5**  
# of featured articles of FMRI research

**4**  
# of organizations participating in  
consortium activities

**120**  
# of attendees to seminar/  
webinar/outreach activities

### Target Outputs

**5**  
# of collaborative proposals/projects

**2,500**  
# of website pageviews

**10**  
# of conference presentations

**6**  
# of peer-reviewed papers

### Target Impacts

**5**  
# of methodologies, models,  
and tools developed

**2**  
# of adopted methodologies,  
models, and tools

**8**  
# of partnerships from industry, agency,  
and academic institutions
