Course Syllabus**

<b>1. Course title/number, number of credit hours</b>	
Biosignal Processing EEE 5286	# of credit hours = 3
<b>2. Course prerequisites, corequisites, and where the course fits in the program of study</b>	
Prerequisites: EEL 4656 Analysis of Linear Systems or permission of instructor.	
<b>3. Course logistics</b>	
Term: Fall 2017  Location: TBD	
<b>4. Instructor contact information</b>	
<i>Instructor's name</i> <i>Office address</i> <i>Office Hours</i> <i>Contact telephone number</i> <i>Email address</i>	Behnaz Ghoraani, PhD Bldg. EE 96/ Room 319 TBD 561-297-4031 <a href="mailto:bghoraani@fau.edu">bghoraani@fau.edu</a>
<b>5. TA contact information</b>	
<i>TA's name</i> <i>Office address</i> <i>Office Hours</i> <i>Contact telephone number</i> <i>Email address</i>	TBD
<b>6. Course description</b>	
<p>This course covers the generation of bioelectrical signals, their acquisition, modeling and analysis. Modeling and analysis tools cover adaptive filtering, time-frequency analysis, model-based spectral analysis, stochastic signals, and signal representation in orthogonal bases: wavelet transforms. The physiology of electrical signal generation covers ionic transport in cellular membranes and propagation of electrical signals in cells and tissues. The range of biomedical signals covered includes such common signals as the electroencephalograms, evoked potentials, electromyograms, electrocardiograms. The students write MATLAB codes to perform common signal analysis such as filtering, autocorrelation and covariance, Fourier-based spectral analysis, the short-time Fourier transform, and noise reduction.</p>	
<b>7. Course objectives/student learning outcomes/program outcomes</b>	
<i>Course objectives</i>	<p>This course provides a comprehensive overview of techniques of processing bioelectrical signals. It is problem-based and programming oriented. Students are expected to code in MATLAB at a level where they can use programming to verify and demonstrate concepts. Demonstration of work will be done with synthetically generated waveforms and real data.</p>

**Department of Computer & Electrical Engineering  
and Computer Science  
Florida Atlantic University  
Course Syllabus**

<b>8. Course evaluation method</b>	
<p>3 MATLAB-based assignments (20% each): 60%</p> <p>Project: 40%</p>	<p>For the project, the students will identify a scientific article for review and implementation. The students will prepare a 10-page technical report to discuss the problem in the paper, the methods applied, implementation of the method in the paper, and their results. Also the students will propose a new approach to address the problem and compare their results with the methods found in the paper. The students will deliver a 15-minutes presentation and present their final work to the class for further discussions with their peers. The project will be implemented in four phases (I-proposing a paper. II-Review of the paper. III-Final Implementation. IV. Final report and presentation)</p>
<b>9. Course grading scale</b>	
<p>Grading Scale: 90 and above: "A", 87-89: "A-", 83-86: "B+", 80-82: "B", 77-79: "B-", 73-76: "C+", 70-72: "C", 67-69: "C-", 63-66: "D+", 60-62: "D", 51-59: "D-", 50 and below: "F."</p>	
<b>10. Policy on makeup tests, late work, and incompletes</b>	
<p><i>Incomplete grades</i> are assigned only if there is a solid evidence of medical or otherwise serious emergency situation incomplete grades will not be given.</p> <p>Late assignment submissions will not be graded and the student will receive a <b>zero</b> for that assignment. There are no make ups for the assignments.</p> <p>The following applies to the final project: after 1 day, the students will lose 25% and after 2 days, 50% of marks. The student will receive a <b>zero</b> after the 2<sup>nd</sup> day of due date.</p>	
<b>11. Special course requirements</b>	
N/A.	
<b>12. Classroom etiquette policy</b>	
<p>FAU course management system (Canvas) will be the official communication tool between the instructor and the students, and it is the student's responsibility to regularly check the course shell for updates and announcements. This includes unforeseen changes to assignment/project deadlines.</p> <p>It is the student's responsibility to inform the professor, within the first week of class, of any conflict with important course dates. No accommodation will be made if these conflicts are not brought to our attention within the first week.</p>

and Computer Science  
Florida Atlantic University  
Course Syllabus**

University policy requires that in order to enhance and maintain a productive atmosphere for education, personal communication devices, such as cellular phones and laptops, are to be disabled in class sessions.

Students are strongly encouraged to ask questions during class. You may not use a PDA, PPC, laptop, netbook or other computer, IPOD or similar device in-class or during quizzes or exams. Cellular/PCS telephones, pagers, PDAs, etc. must be turned-off or put in vibrate mode during class. If your device disrupts the lecture, you may be asked to leave immediately. Upon a second offense, you will need to explain your actions to the CEECS Department Chair before being allowed to return. If you require an exception to this policy, please see me before creating a disturbance.

Although you are EXPECTED and ENCOURAGED to utilize a study-group, individual and original efforts are expected for all exams, quizzes and homework assignments except when otherwise stated. **Cheating in any form will not be tolerated. Students giving and/or receiving assistance on an exam will be given a grade of zero for the exam. Furthermore, the incident will be reported per the College policy on Academic Dishonesty.**

### 13. Disability policy statement

In compliance with the Americans with Disabilities Act Amendments Act (ADAAA), students who require reasonable accommodations due to a disability to properly execute coursework must register with Student Accessibility Services (SAS)—in Boca Raton, SU 133 (561-297-3880); in Davie, LA 131 (954-236-1222); or in Jupiter, SR 111F (561-799-8585)—and follow all SAS procedures.

### 14. Honor code policy

Students at Florida Atlantic University are expected to maintain the highest ethical standards. Academic dishonesty is considered a serious breach of these ethical standards, because it interferes with the university mission to provide a high quality education in which no student enjoys unfair advantage over any other. Academic dishonesty is also destructive of the university community, which is grounded in a system of mutual trust and place high value on personal integrity and individual responsibility. Harsh penalties are associated with academic dishonesty. See University Regulation 4.001 at [www.fau.edu/regulations/chapter4/4.001\\_Code\\_of\\_Academic\\_Integrity.pdf](http://www.fau.edu/regulations/chapter4/4.001_Code_of_Academic_Integrity.pdf)

### 15. Required texts/reading

*Bioelectrical Signal Processing in Cardiac and Neurological Applications* by Leif Sornmo and Pablo Laguna. Elsevier Academic Press, ISBN: 978-0-12-437552-9, 2005.

### 16. Supplementary/recommended readings

R.M. Rangayyan, *Biomedical Signal Analysis: A Case-Study Approach*, 1st Edition IEEE and Wiley, 2002

A.V. Oppenheim and A.S. Willsky with S. Hamid, *Signals and Systems*, 2nd Edition, Prentice Hall, 1996.

A.V. Oppenheim and R.W. Schafer with J. Buck, *Discrete-Time Signal Processing*, 3rd Edition, Prentice Hall, 2010.

Demonstration of work will be done with synthetically generated waveforms and real data, which is available from the public database: <http://www.physionet.org/>

and Computer Science  
Florida Atlantic University  
Course Syllabus**

**17. Course topical outline, including dates for exams/quizzes, papers, completion of reading**

Weekly Schedule	Topics
Week 01	Basics of Bioelectrical Signals – Chapter 1 <ul style="list-style-type: none"> <li>– On the cellular level</li> <li>– On the body surface</li> <li>– Bioelectrical signals</li> <li>– Signal acquisition and analysis</li> <li>– Databases/simulation</li> </ul>
Week 02	The Electrocardiogram Signal Processing – Chapter 6 <ul style="list-style-type: none"> <li>– Electrical activity of the heart</li> <li>– Generation and recording of an ECG (Depolarization/repolarization, recording techniques, ECG waves and time intervals)</li> <li>– Different types of heart rhythm</li> <li>– Heart beat morphologies</li> <li>– Noise and artifacts</li> <li>– Clinical applications (resting ECG, Intensive care monitoring, ambulatory monitoring, stress test, high-resolution ECG)</li> </ul>
Week 03	ECG Signal Processing – Chapter 7 <ul style="list-style-type: none"> <li>– Baseline wander filtering (linear filtering, time-varying/time, Polynomial fitting)</li> <li>– Powerline interference (linear/non-linear filtering, estimation subtraction)</li> <li>– Muscle noise filtering</li> </ul> <b>Assignment #1</b>
Week 04	Continue ECG Signal Processing – Chapter 7 <ul style="list-style-type: none"> <li>– QRS detection</li> <li>– Wave delineation</li> <li>– Data compression</li> </ul> <b>Project phase I</b>
Week 05	Evoked Potentials – Chapter 4 <ul style="list-style-type: none"> <li>– Evoke potential modalities</li> <li>– Noise characteristics &amp; noise reduction methods (ensemble averaging, linear filtering)</li> <li>– Single trial analysis by Basis functions (orthogonal expansion, Karhunen-Loeve expansion, modeling with damped sinusoids)</li> </ul>
Week 06	Continue Evoked Potentials – Chapter 4 <ul style="list-style-type: none"> <li>– Adaptive filtering using Basis functions</li> <li>– Instantaneous LMS algorithm, block LSM algorithm</li> </ul>
Week 07	Continue Evoked Potentials – Chapter 4 <ul style="list-style-type: none"> <li>– Wavelets transform</li> <li>– Multi-resolution signal analysis</li> <li>– Denoising using wavelet filtering</li> </ul>

**Department of Computer & Electrical Engineering  
and Computer Science  
Florida Atlantic University  
Course Syllabus**

	<b>Assignment #2</b>
Week 08	<p>The Electroencephalogram (EEG) – Chapter 2</p> <ul style="list-style-type: none"> <li>– The nervous system (neurons, the cerebral cortex)</li> <li>– The EEG signals (Rhythms and waveforms, categorization of EEG activity)</li> <li>– Recording techniques</li> <li>– Applications of EEG (epilepsy, sleep disorder, brain-computer interface)</li> </ul> <p><b>Project phase II</b></p>
Week 09	<p>EEG Signal Processing- Chapter 3</p> <ul style="list-style-type: none"> <li>– Modeling the EEG signals (deterministic and stochastic signals, stochastic models, nonlinear modeling of the EEG)</li> <li>– Artifacts in EEG (characteristics, processing, cancellation)</li> </ul>
Week 10	<p>Continue EEG Signal Processing- Chapter 3</p> <ul style="list-style-type: none"> <li>– Non-parametric spectral analysis (Fourier-based power spectrum analysis/ spectral parameters)</li> <li>– Model-based spectral analysis</li> </ul>
Week 11	<p>Continue EEG Signal Processing- Chapter 3</p> <ul style="list-style-type: none"> <li>– EEG segmentation</li> <li>– Spectral measure error</li> <li>– The Periodogram approach</li> <li>– The whitening approach</li> </ul> <p><b>Assignment #3</b></p>
Week 12	<p>Continue EEG Signal Processing- Chapter 3</p> <ul style="list-style-type: none"> <li>– Joint time-frequency analysis</li> <li>– The short-time Fourier transform</li> <li>– The ambiguity function</li> <li>– The Wigner-Ville distribution</li> <li>– Cohen's class time-frequency distributions</li> </ul> <p><b>Project phase III</b></p>
Week 13	<p>The Electromyogram -Chapter 5</p> <ul style="list-style-type: none"> <li>– The electrical activity of muscles (action potentials and motor units)</li> <li>– Recording of myoelectric signals</li> <li>– EMG applications</li> <li>– Amplitude estimation using signal model and ML estimation</li> <li>– Spectral analysis of the EMG signal</li> </ul>
Week 14	<p>Continue the Electromyogram -Chapter 5</p> <ul style="list-style-type: none"> <li>– Conduction velocity estimation (two-channel and multi-channel time delay estimation)</li> <li>– Modeling and intramuscular EMG (the MUAP train amplitude and power spectrum)</li> <li>– Intramuscular EMG signal decomposition (feature extraction and clustering)</li> </ul>
Week 15	<p>Students' project presentations</p> <p><b>Project Phase IV</b></p>

Hi Behnaz,

After checking with our Graduate Office, no overlap was noted. We recommend approval and extend our best wishes towards a successful launch of your new course.

Best Regards,

Janet

Hi Janet,

At first glance looks like an OK specialty course and does not compete with any of our course listings.

I see no objection.

Thanks, Marc

**Subject:** Request for a new course approval - Biosignal processing,

Dear Dr. Robishaw,  
The Department of Computer & Electrical Engineering and Computer Science (CEECS) is proposing a new course: EEE 5286 – Biosignal Processing. Please see the attached syllabus for this course.  
We need your approval that Department of Biomedical Sciences has no objection to this new course proposal. Could you please review the syllabus and email me your decision on approval at your earliest convenience?

Thanks and regards,  
Behnaz
